📱 CesaireMH

SOFT SKILLS

Communication
Problem Solving
Teamwork and Collaboration

TECHNICAL SKILLS

Low Level Programing
Kernel Development
Serverless Architecture
Kernel Optimization
Automated Testing
Docker Containers

LANGUAGES

French
native
English
B2

INTERESTS

Music
Light Novels and Animes

PROFILE

Linux Systems Engineer and finishing Ph.D. student in Operating Systems with hands-on experience in Linux kernel development, including real contributions to VPN performance and CPU energy efficiency. Skilled in kernel networking, cloud-native deployments, and performance optimization. A problem-solver with strong teamwork abilities, dedicated to tackling complex, impactful challenges through rigorous engineering and innovation.

WORK EXPERIENCE

Optimizing Linux Kernel Networking

Ph.D Work, Rennes / December 2022

- Investigated performance bottlenecks in the WireGuard VPN module, identifying Execution Order Inversion (Eoi) as the root cause of a 5x throughput drop,
- Designed and implemented asynchronous kernel APIs (kernel threads,workqueues) to resolve the bottleneck.

Energy Efficiency of Intel Heterogeneous CPUs

Ph.D Work, Rennes / December 2022

- Built an automated benchmarking framework to evaluate Intel heterogeneous CPUs (P-cores/E-cores) across DVFS governors and workload types.
- Delivered actionable insights for scheduler design and CPU tuning, balancing performance and energy efficiency

Cloud-Native Malware Detection Platform (OpenFaaS)

Internship - IRISA, Rennes / June 2022 - September 2022

- Designed and deployed a serverless detection pipeline using OpenFaaS and OpenWhisk, enabling on-demand analysis of Android network traffic.
- Benchmarked and compared FaaS-based detection performance with traditional anti-malware solutions.

EDUCATION

Ph.D in Computer Science - Operating Systems

Inria - University of Rennes, Rennes / December 2022

Theme: Understanding Linux Scheduling Bottlenecks

Engineering Degree in Computer Science

National Advanced School of Engineering of Yaoundé, Yaounde / September 2017 - October 2022

Field(s) of study: Computer Engineering

SCIENTIFIC PUBLICATIONS

The Impact of Kernel Asynchronous APIs on the Performance of a Kernel VPN

- Authors: Honore Cesaire Mounah, Djob Mvondo, Julia Lawall, and Yerom-David Bromberg.
- Venue: 18th ACM International Systems and Storage Conference (SYSTOR '25). Association for Computing Machinery, New York, NY, USA, 167–173.
- DOI:
- Link to the presentation:
